# LS-DYNA

| Type | LS-DYNA ID | Related LS-DYNA Database | Remark |
|---|---|---|---|
| NODE | Node ID | *DATABASE_HISTORY_NODE | definition of multiple nodes possible to define different nodes for x,y and z direction |
| OBJECT | Part ID | *DATASE_ELOUT, *DATABASE_HISTORY_SHELL, *DATABASE_HISTORY_SOLID | analysis of all shells and solids related to one part |
| CONTACT | contact ID | *DATABASE_RCFORC | s for slave and m for master |
| ELEMENT | beam ID | *DATABASE_HISTORY_BEAM, *DATABASE_ELOUT | |
| DISCRETE | beam ID | *DATABASE_HISTORY_DISCRETE, *DATABASE_DEFORC | |
| CROSS_SECTION | crossection ID | *DATABASE_SECFORC | |
| SEAT_BELT | seatbelt ID | *DATABASE_HISTORY_SEATBELT, *DATABASE_SBTOUT | |
| ENERGY_PART | matsum | *DATABASE_MATSUM | |
| ENERGY_GLOBAL | glstat | *DATABASE_GLSTAT | |
| DISBOUT | disbout | *DATABASE_DISBOUT | |
| DISBOUT_PART | disbout | *DATABASE_DISBOUT | |
| ABSTAT | abstat | *DATABASE_ABSTAT | |
| ABSTATCPM | abstat | *DATABASE_ABSTAT | |
| JOINT | jntforc | *DATABASE_JNTFORC | |
| SLEOUT | sleout | *DATABASE_SLEOUT | |
| BOUNDARY_CONDITION | bndout | *DATABASE_BNDOUT | |
| RIGID_BODY | rbdout | *DATABASE_RBDOUT | |

The history data has to be written into the binary database **binout** (set parameter BINARY to 2 or 3 in the *DATABASE card)

# VPS

| Type | VPS ID | Related VPS Database | Remark |
|---|---|---|---|
| NODE | Node ID | criteria, data visualisation | |
| CROSS_SECTION | crossection ID | *DATABASE_SECFORC | |

# MADYMO

| Type | Madymo ID | Related MADYMO Database | Remark |
|---|---|---|---|
| NODE | Angular | | definition of multiple nodes possible to define different nodes for x,y and z direction |

| | | | |
|---|---|---|---|
| | | | |
| CONTACT | contact loads | | |
| ENERGY_PART | Energy output | | |
| ENERGY_GLOBAL | Energy output | | |
| CROSS_SECTION | Belt and restraint forces | | |

## Commenti

**Stefano Tomassi** @StefanoTomassi · 17 lug 2026, 16:26 CEST

Dear developers,

I would like to suggest an addition in the LS-Dyna type objects table:

To analyze the measurements of the slipring and the retractor the actual correct definition for these type of objects are RETRACTOR and SLIP_RING (and related LS-Dyna database *DATABASE_HISTORY_SEATBELT_RETRACTOR and _*_DATABASE_HISTORY_SEATBELT_SLIPRING).

As they are stored through also through the *DATABASE_SBTOUT, at first I erroneously defined these objects as SEAT_BELT type objects in the object definition file.

For sake of clarity, I would put these two object type definition in the table.

Best regards.
